Devon Wildlife Trust

Marine Strandings Network

monitoring marine
wildlife along Devon's
two coasts

Devon Wildlife Trust Marine Strandings Network is supported by specially trained volunteers, with the aim of gathering data on dead marine wildlife to help advocate for better protection of Devon's marine megafauna.

All data is sent to the Cetacean Strandings Investigation Programme, who investigate causes of death in marine mammals, basking sharks and turtles in England and Wales and identify threats to their survival.
